

SERIES 7

TRACKLESS VEHICLES COLD PLANER

Sidewalk maintenance doesn't stop when the snow melts. The winter freeze-thaw cycles can cause frost heave and play havoc on pedestrian walkways creating dangerous trip hazards and liability exposure for the city. Removing these hazards is often outsourced to companies that specialize in slab jacking (aka mudjacking), grinding or milling. However, a public works department equipped with a Trackless MT has the ability to repair asphalt and concrete surface damages in a cleaner, faster and more cost-effective manner saving the city from unnecessary costs.

Asphalt Drum

Your Choice, Asphalt or Concrete

The Asphalt Cold Planer is ideal for repairs to asphalt abutting manhole covers, curb sides, gutters and driveways. It can also be used for pothole repair or any other utility cut. The Concrete Cold Planer has approximately three times more picks and operates at a higher speed.
